Default Driver Set Up
Quick Guide

This document is to assist you in using the Default Driver setting in Cheetah to automatically assign drivers to routes in Web Editor.

Tip: For easy navigation, press Ctrl + F (find) or Navigation under 'view' in the browser, then click Headings.

To begin the process, log into Asset Manager:

1. Select the **'Routes'** TAB
2. Select **'Market'**
3. Click the route to add a default driver
4. Enter the **Default Driver number** in the Routing Info section
5. Click the **'Save'** button at the top

- Once completed the chosen drivers will be associated with the routes automatically in Web Editor within 36 hours for all days that haven't been pre-routed.
- This will need to be repeated for terminated/hired drivers and will take another 36 hours for all days that haven't been pre-routed.
- This will not automatically Activate a route if it is Deactivated.
