PODS® Moving & Storage

Confidential and proprietary

SCW Log

The SCW Log is a comprehensive dashboard for all container moves, allowing storage center workers greater visibility into incoming containers for easier preparation ahead of delivery/RTW.

The dashboard shows the Storage Center ETA for every job, giving storage center workers the expected window for when a Driver will return/arrive at the storage center.

Reporting Date	Site Market Name	Assigned Site Id	Container Id	Move Type	Move Type	Storage Center ETA	Trip Number	Move Driver Name	Route Number	Customer Facing ETA	Order Number	Move Number	Customer Name

What's Included

Identifying Information

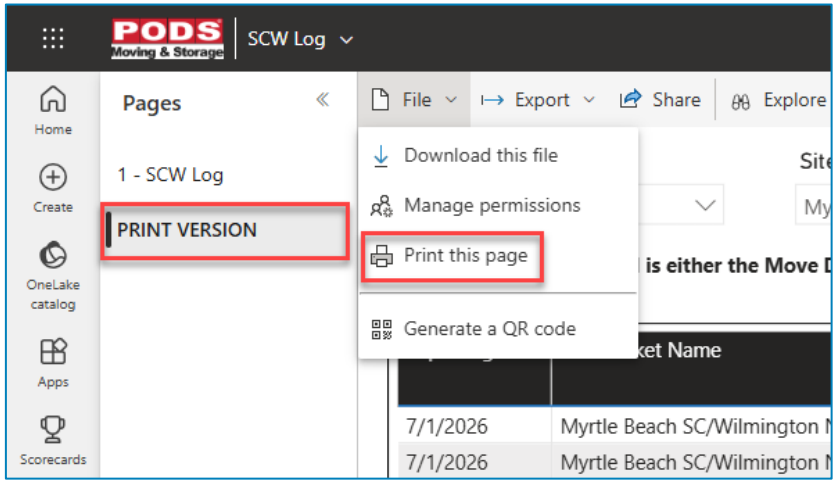

- Each container in the log will have the market name, the move type, the job ID, the storage center ETA, and other identifiable information to help locate containers and their moves.

Identifying OTR Moves

- OTR moves can be identified the "Trip Number" column or the "Route Number" column, as all OTR moves will be marked with trip number AND a route number of 0.

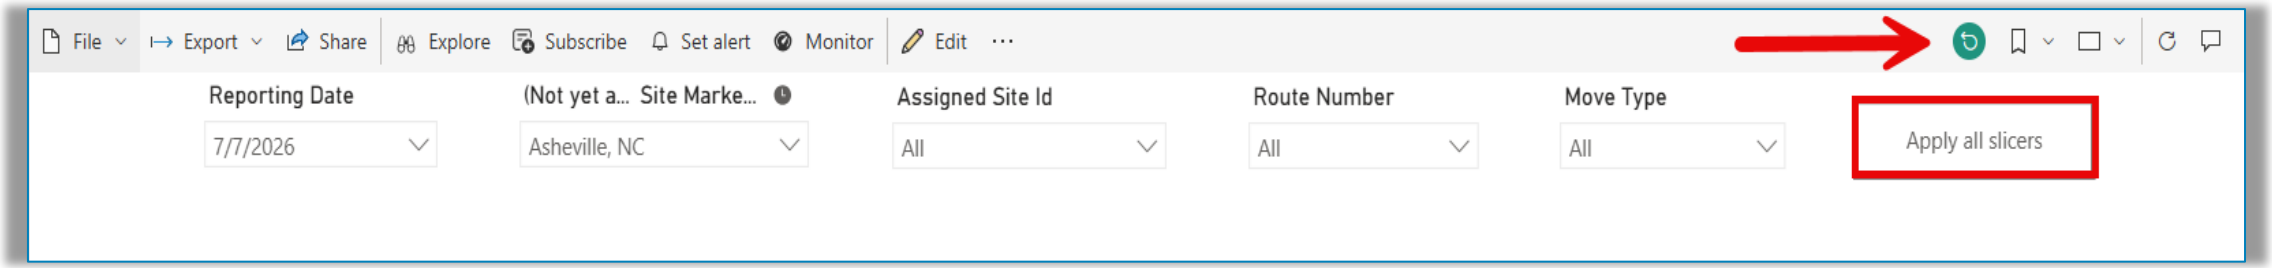

Print Version

- The SCW Log also includes a print version of the dashboard. This version is condensed, removing the "To Address" and "From Address" columns for an simpler, easier printable version for storage center workers.

Additional Notes

- The dashboard refreshes hourly, so any changes made will reflect on the dashboard within the hour.
- Report date will always default to current date. Once filters are selected click apply all filters to refresh data
- Some container deliveries that are being routed in Cheetah to a staging yard are appearing in the dashboard as a Storage Center ETA, even though it is being delivered to a staging area and **NOT** a storage center. This is an identified fix in progress.
- The “reset” button in the top right corner of the page. This button instantly resets all filters applied to the view.
